Work History

2018-06 -
Current

Swaas System Pvt Lmt

Software Developer, Chennai, Tamil Nadu

Project 1: IoT Based- Water Monitor with Advanced Leak Detection

- Developed an IoT project for controlling and detecting water leakage in real life using **Aws services** like **Aws IoT core, Aws Lambda Functions, Aws SNS and Push Notification, Aws DynamoDB (NoSQL), EC2 Instance.**
- Build wireframes and prototypes for a better understanding of the project at requirement phase using designing tool **Figma.**

Project 2 - Delivery Project Manager Tool

- Front Office: End client can track, register sites, place site orders (Device) with configurations as per the requirement.
- Back Office: Delivery project Manager can verify the client order and approving it for the provisioning and Sales rep can make demo site orders for the clients as per the requirements
- Integration was done with an existing client API's to complete the life cycle of an order.

Project 3 - Email Trigger (Automation Marketing Tool)

- Work closely with other development teams and infrastructure specialist of our company.
- Created a common tool for different teams to create email templates, configure targets and scheduling emails for marketing.

Project 4 - Campaigning Tool

- My job was to create different campaigns (microsites) for different clients as per the requirement.
- Email template creation and enhancement work

Syncfusion

Figma, Balsamiq - Designing Tool

Personal Learnings

Jatin Nandwani

1 - Online Grocery Shopping

- A full fledged website where customer can order vegetables and other household necessities and suppliers can sell their products.
- Back office - Which can handle different suppliers, regions, banner setting, product pricing and thumbnails, shipping prices, delivery slots and payments.
- Website url - **buydiz.com**

2 - Instagram bot using Node js library - Puppeteer

- Build the prototype that will login itself in **Instagram** with provided username and password, will navigate to assigned accounts or pages, open up the recent images for that account, like and closes them and takes screenshots.

2 - Error logging and masking in node js using Bunyan library.

- Logs have been an essential part of troubleshooting application. Log data contains information such as out of memory exception or hard disk errors.
- The main reason for applying masking to a data field is to protect data that is classified as personally identifiable information.

3 - Web Scraping with library cheerio in node js

- Web scraping is done which will open up the medium home page in the backend and fetch all the unique links from the medium home page.

4 - Online Super Market - In Angular

- Use and customize angular material components.
- Various concepts to learn and teach my friends.

Interests

Devops and cloud computing

Education
